

Question:

James decides to run 3 sprints 3 times a week. He runs 60 meters each sprint. How many total meters does he run a week?

Reasoning + Answer:

<think>

James decides to run 3 sprints 3 times a week , so the number of sprints he runs in a week is :

$$[3 \times 3 = 9 \text{ sprints}]$$

Since he runs 60 meters each sprint , the total number of meters he runs in a week is :

$$[9 \times 60 = 540 \text{ meters}]$$
</think>

<answer>540</answer>
