

Question:

Josh decides to try flipping a house. He buys a house for \$80,000 and then puts in \$50,000 in repairs. This increased the value of the house by 150%. How much profit did he make?

Reasoning + Answer:

<think>
Josh buys a house for \$80,000 and puts in \$50,000 in repairs, so the total amount spent on the house is:
$$[80,000 + 50,000 = 130,000 \text{ dollars}]$$

The value of the house increased by 150%, so the increase in value is:
$$[130,000 \times \frac{150}{100} = 195,000 \text{ dollars}]$$

Thus, the new value of the house is:
$$[80,000 + 195,000 = 275,000 \text{ dollars}]$$

Since Josh spent \$130,000 to buy and repair the house, the profit he made is:
$$[275,000 - 130,000 = 145,000 \text{ dollars}]$$
</think>
<answer>145000</answer>
