

Question:

Kylar went to the store to buy glasses for his new apartment. One glass costs \$5, but every second glass costs only 60% of the price. Kylar wants to buy 16 glasses. How much does he need to pay for them?

Reasoning + Answer:

<think>
the first glass is 5
the second glass is $5 * 0.6 = 3$
the total for 2 glasses is $5 + 3 = 8$
the total is $16 / 2 = 8$
the total for 8 glasses is $8 * 5 = 40$
the total for 8 glasses is $8 * 3 = 24$
the total is $40 + 24 = 64$
</think><answer>64</answer>
