

Question:

Carla is downloading a 200 GB file. Normally she can download 2 GB/minute, but 40% of the way through the download, Windows forces a restart to install updates, which takes 20 minutes. Then Carla has to restart the download from the beginning. How long does it take to download the file?

Reasoning + Answer:

<think>
the file size is 200 gb
time to download without break is $200 / 2 = 100$ minutes
40% of 200 is $0.4 * 200 = 80$
time to download 80 gb is $80 / 2 = 40$
but with 20 min of update
total time is $100 + 40 + 20 = 160$
</think><answer>160</answer>
