

Question:

Kylar went to the store to buy glasses for his new apartment. One glass costs \$5, but every second glass costs only 60% of the price. Kylar wants to buy 16 glasses. How much does he need to pay for them?

Reasoning + Answer:

<think>
the first glass is 5
the second glass is $5 * 0.6 = 3$
the third glass is 5
the fourth glass is 3
so the price is $5 + 3 + 5 + 3 = 16$
total is $16 * 5 = 80$
</think><answer>80</answer>
