

Question:

Claire earns 1 girl scout badge every month. It takes Amber twice as long to earn a badge than Claire. Wendy earns three times the amount of badges as Claire in the same time frame. How many more badges does Wendy earn compared to Amber in a 1 year time frame?

Reasoning + Answer:

<think>
it takes claire 1 month to earn one badge
it takes amber twice as long so it takes her 2 months to earn one badge
so in a year she will earn $12 / 2 = 6$ badges
wendy earns three times the amount of badges so she will earn $6 * 3 = 18$
the difference in the amount of badges is $18 - 6 = 12$
</think>
