

Question:

Seth gave half of his stickers to Luis. Luis used half of the stickers and gave the rest to Kris. Kris kept 9 of the stickers and gave the remaining 7 stickers to Rob. How many stickers did Seth have in the beginning?

Reasoning + Answer:

<think>
kris gave 7 stickers to Rob so he got $9 + 7 = 16$
Luis used half of the stickers so half of them were 16
this means Luis had $16 * 2 = 32$
since seth gave half of his stickers to Luis
so seth had $32 * 2 = 64$
</think>
