

Question:

Kylar went to the store to buy glasses for his new apartment. One glass costs \$5, but every second glass costs only 60% of the price. Kylar wants to buy 16 glasses. How much does he need to pay for them?

Reasoning + Answer:

<think>

Every second glass costs $0.6 * 5 = \$3$. Total number of non-seconds glasses = $16 / 2 = 8$.

Cost for non-seconds glasses = $8 * 5 = \$40$.

Cost for all seconds glasses = $8 * 3 = \$24$.

Total cost = $40 + 24 = \$64$.

<answer> 64 </answer>
