

Question:

Kylar went to the store to buy glasses for his new apartment. One glass costs \$5, but every second glass costs only 60% of the price. Kylar wants to buy 16 glasses. How much does he need to pay for them?

Reasoning + Answer:

<think>

First glass costs \$ 5 , second $\$ 5 * 0.6 = \$ 3$. So two glasses cost $\$ 5 + \$ 3 = \$ 8$. For every pair of glasses he needs $8 / 2 = 4$ glasses he gets for free . $16 / 4 = 4$ pairs of glasses he gets for free . So he needs to pay for $16 - 4 * 2 = 8$ glasses . Total cost is $8 * 5 = \$ 40$.

<answer> 40 </answer>
