

Question:

John drives for 3 hours at a speed of 60 mph and then turns around because he realizes he forgot something very important at home. He tries to get home in 4 hours but spends the first 2 hours in standstill traffic. He spends the next half-hour driving at a speed of 30mph, before being able to drive the remaining time of the 4 hours going at 80 mph. How far is he from home at the end of those 4 hours?

Reasoning + Answer:

<think>
Initial distance = $3 \times 60 = 180$ miles . After turning back , he covers half mile at 30 mph and then same returning at 80 mph . So , $\frac{1}{2} \times \frac{1}{30} + \frac{1}{80} = \frac{1}{48}$ hours . So , distance covered in last segment = $180 - \frac{1}{48} \times 80 = 175$ miles .
<answer>175</answer>
