

Question:

Carla is downloading a 200 GB file. Normally she can download 2 GB/minute, but 40% of the way through the download, Windows forces a restart to install updates, which takes 20 minutes. Then Carla has to restart the download from the beginning. How long does it take to download the file?

Reasoning + Answer:

<think>

She is downloading 200 GB file and 40% of 200 GB is $200 \times 0.4 = 80$ GB

She can download 2 GB per minute so to download 80 GB will take $80 / 2 = 40$ minutes

Then windows forces a restart and it takes 20 minutes

After the restart she has to download 200 GB again so it will take $200 / 2 = 100$ minutes

Altogether it takes $40 + 20 + 100 = 160$ minutes

</think>

<answer> 160 </answer>
