

Question:

Carla is downloading a 200 GB file. Normally she can download 2 GB/minute, but 40% of the way through the download, Windows forces a restart to install updates, which takes 20 minutes. Then Carla has to restart the download from the beginning. How long does it take to download the file?

Reasoning + Answer:

<think>

She can download 2 GB per minute so 40% of 200 GB is $0.4 \times 200 = 80$ GB

It takes her $80 / 2 = 40$ minutes to download 80 GB

Windows forces a restart so she has to restart 40 minutes later and she has to restart from the beginning

The total time is $40 + 20 = 60$ minutes

After the restart she needs to download again 80 GB so it takes her another $80 / 2 = 40$ minutes

The total time is $60 + 40 = 100$ minutes

</think>

<answer>100</answer>
