

Question:

John drives for 3 hours at a speed of 60 mph and then turns around because he realizes he forgot something very important at home. He tries to get home in 4 hours but spends the first 2 hours in standstill traffic. He spends the next half-hour driving at a speed of 30mph, before being able to drive the remaining time of the 4 hours going at 80 mph. How far is he from home at the end of those 4 hours?

Reasoning + Answer:

<think>

He drives for 3 hours at 60 mph so he has driven $3 \times 60 = 180$ miles

He turns around and try to get home in 4 hours but spend 2 hours in stand still traffic so he has $4 - 2 = 2$ hours to drive

He spends the next half hour driving at 30 mph so he drives $30 \times 0.5 = 15$ miles

He has $2 - 0.5 = 1.5$ hours left to drive

He drive the remaining time at 80 mph so he drive $80 \times 1.5 = 120$ miles

Altogether he drive $180 - 15 + 120 = 285$ miles

</think>

<answer>285</answer>
