

Question:
A merchant wants to make a choice of purchase between 2 purchase plans: jewelry worth \$5,000 or electronic gadgets worth \$8,000. His financial advisor speculates that the jewelry market will go up 2.5% while the electronic gadgets market will rise 1.2% within the same month. If the merchant is looking to maximize profit at the end of this month by making a choice, how much profit would this be?

Reasoning + Answer:

Let's break down the problem step by step to determine which purchase plan will maximize the profit at the end of the month and by how much .

Step1 : Calculate the profit from the jewelry purchase plan

- 1. **Initial value of jewelry**: \$ 5 , 0 0 0
- 2. **Market increase for jewelry**: 2 . 5 %

To find the profit from the jewelry purchase plan , we need to calculate the new value of the jewelry after the market increase and then determine the profit .

```
#### Calculation :  
- Market increase in dollars :  
\[  
\text { Increase } = 5 0 0 0 \times \frac { 2 . 5 } { 1 0 0 }  
\]  
\[  
\text { Increase } = 5 0 0 0 \times 0 . 0 2 5  
\]  
\[  
\text { Increase } = 1 2 5  
\]  
  
- New value of the jewelry :  
\[  
\text { New value } = 5 0 0 0 + 1 2 5  
\]  
\[  
\text { New value } = 5 1 2 5  
\]  
  
- Profit from jewelry :  
\[  
\text { Profit } = \text { New value } - \text { Initial value }  
\]  
\[  
\text { Profit } = 5 1 2 5 - 5 0 0 0  
\]  
\[  
\text { Profit } = 1 2 5  
\]
```

Step2 : Calculate the profit from the electronic gadgets purchase plan

- 1. **Initial value of electronic gadgets**: \$ 8 , 0 0 0
- 2. **Market increase for electronic gadgets**: 1 . 2 %

To find the profit from the electronic gadgets purchase plan , we need to calculate the new value of the gadgets after the market increase and then determine the profit .

```
#### Calculation :  
- Market increase in dollars :  
\[  
\text { Increase } = 8 0 0 0 \times \frac { 1 . 2 } { 1 0 0 }  
\]  
\[  
\text { Increase } = 8 0 0 0 \times 0 . 0 1 2  
\]  
\[  
\text { Increase } = 9 6  
\]  
  
- New value of the electronic gadgets :  
\[  
\text { New value } = 8 0 0 0 + 9 6  
\]  
\[  
\text { New value } = 8 0 9 6  
\]  
  
- Profit from electronic gadgets :  
\[  
\text { Profit } = \text { New value } - \text { Initial value }  
\]  
\[  
\text { Profit } = 8 0 9 6 - 8 0 0 0  
\]  
\[  
\text { Profit } = 9 6  
\]
```

Step3 : Compare the profits and determine the maximum profit

- Profit from jewelry : \$ 1 2 5
- Profit from electronic gadgets : \$ 9 6

The maximum profit is from the jewelry purchase plan .

```
#### Final Answer  
<think>  
1. Jewelry profit : $ 1 2 5  
2. Electronic gadgets profit : $ 9 6  
3. Maximum profit : $ 1 2 5  
</think>  
<answer>125</answer>
