

Question:

John drives for 3 hours at a speed of 60 mph and then turns around because he realizes he forgot something very important at home. He tries to get home in 4 hours but spends the first 2 hours in standstill traffic. He spends the next half-hour driving at a speed of 30mph, before being able to drive the remaining time of the 4 hours going at 80 mph. How far is he from home at the end of those 4 hours?

Reasoning + Answer:

Let's solve this problem step-by-step :

<think>

For 1st trip :

$Distance = 60 \times 3 = 180 \text{ miles}$

For return trip :

$Stuck\ in\ traffic : 2 \times 0 = 0 \text{ miles}$

$30 \times 1/2 = 15 \text{ miles}$

$80 \times 1.5 = 120 \text{ miles}$

$Total = 15 + 120 = 135 \text{ miles}$

$John\ is\ 180 - 135 = 45 \text{ miles from home}$

</think><answer> 45 </answer>
