

Question:

Kylar went to the store to buy glasses for his new apartment. One glass costs \$5, but every second glass costs only 60% of the price. Kylar wants to buy 16 glasses. How much does he need to pay for them?

Reasoning + Answer:

Let's solve this problem step-by-step:

<think>

1st glass costs \$ 5

2nd glass costs $60 / 100 \cdot 5 = 3 \cdot 5 = 3 \cdot \$ 3 = \$ 1.80$

Pair of 2 glasses costs $5 + 1.8 = 6.8$

Number of pairs $= 16 \cdot 2 = 8$ pairs

Total cost $= 8 \cdot 6.8 = \$ 54.40$

</think><answer>54.40</answer>
