

Question:

John drives for 3 hours at a speed of 60 mph and then turns around because he realizes he forgot something very important at home. He tries to get home in 4 hours but spends the first 2 hours in standstill traffic. He spends the next half-hour driving at a speed of 30mph, before being able to drive the remaining time of the 4 hours going at 80 mph. How far is he from home at the end of those 4 hours?

Reasoning + Answer:

Let's solve this problem step-by-step:

<think>

For 1st part: $3 \times 60 = 180$ miles to work

Returns: $2 \times 0 = 0$ miles

$30 / 2 = 15$ min = $1/4$ hr

$15 \times 30 = 45$ miles

$3/4 \times 80 = 60$ mph

$(4 - 1/4) \times 60 = 3 \times 60 = 180$ miles

Total travel = $180 + 0 + 45 + 180 = 305$ miles

So 35 miles from home

</think><answer>35</answer>
