

Question:

Carlos is planting a lemon tree. The tree will cost \$90 to plant. Each year it will grow 7 lemons, which he can sell for \$1.5 each. It costs \$3 a year to water and feed the tree. How many years will it take before he starts earning money on the lemon tree?

Reasoning + Answer:

<think> First let's calculate the annual cost of maintaining the tree . The tree costs 3 dollars per year to water and feed . Additionally the tree produces 7 lemons per year . Each lemon is sold for 1 . 5 dollars . Therefore $7 * 1 . 5 = 10 . 5$ dollars . The total revenue from selling the lemons equals the cost of maintaining the tree . Therefore in one year . In the first year the tree will not start earning money . Because the cost to plant the tree is 90 dollars . And the tree will start earning money in the second year . Therefore in the second year the tree will start earning money . </think>< answer > 2 </answer>
