

Question:

What are the minimum and maximum possible values of Glasgow Coma Score?

Answer Choices:

- A. Minimum = 3, Maximum = 15
- B. Minimum = 0, Maximum = 13
- C. Minimum = 0, Maximum = 15
- D. Minimum = 3, Maximum = 18

Reasoning + Answer:

<think> To answer this question, we need to look at the conventional scoring system for the Glasgow Coma Score, which is a clinical scale used to assess the level of consciousness in a person.

The Glasgow Coma Score is typically composed of three components: eye opening, verbal response, and motor response. Each component is scored separately, and the total score is the sum of the three components.

The possible scores for each component are as follows:

- * Eye opening: 1 - 4 points
- * Verbal response: 1 - 4 points
- * Motor response: 1 - 6 points

The total possible score is therefore 1 - 14 points, but some sources may score it as 1 - 15 points.

The minimum possible score is 3, which is typically considered to be the worst possible score, indicating a coma or a very unresponsive state.

The maximum possible score is 15, which is typically considered to be the best possible score, indicating a fully awake and alert person.

Based on this information, it is likely that the minimum and maximum possible values of the Glasgow Coma Score are 3 and 15, respectively.</think><answer> Minimum = 3, Maximum = 15 </answer>>
