

Question:
Bivalent meningococcal vaccine is ?

Answer Choices:

- A. A Y
- B. A C
- C. C y
- D. A W-I35

Reasoning + Answer:

<think> To answer this question , we need to look at the properties of the bivalent meningococcal vaccine .

The bivalent meningococcal vaccine is a type of vaccine that is designed to protect against two different strains of the meningococcal bacterium , which are known to cause meningitis .

One of the common strains of the meningococcal bacterium is serroup A , which is known to be a major cause of meningitis in many parts of the world .

Another strain of the meningococcal bacterium that is sometimes included in the bivalent vaccine is serogroup C , which is also a known cause of meningitis .

The vaccine is often referred to as a "bivalent" vaccine because it is designed to protect against two different serogroups of the bacterium .

Based on this information , it is likely that the bivalent meningococcal vaccine is designed to protect against serogroup A and C .

</think><answer> A C </answer>
