

Question:

Shock causes:

Answer Choices:

- A. Stagnant hypoxia
- B. Anemic hypoxia
- C. Hypoxic hypoxia
- D. Histotoxic hypoxia

Reasoning + Answer:

<think> Shock can be caused by various factors , but in the context of hypoxia , we are looking for the type of hypoxia that is related to shock . Anemic hypoxia occurs when there is a problem with the blood 's ability to carry oxygen , such as anemia or carbon monoxide poisoning . Hypoxic hypoxia refers to low oxygen levels in the air or a problem with the lungs ' ability to get oxygen into the blood . Histotoxic hypoxia is caused by substances that interfere with the body 's ability to use oxygen , such as cyanide poisoning . Stagnant hypoxia , on the other hand , is caused by a problem with blood flow , which can lead to a lack of oxygen delivery to tissues , often resulting in shock . This can be due to factors such as cardiac arrest , severe bleeding , or severe dehydration . </think> <answer> C. Hypoxic hypoxia </answer>
