

Question:

A mental health volunteer is interviewing locals as part of a community outreach program. A 46-year-old man discloses that he has felt sad for as long as he can remember. He feels as though his life is cursed and if something terrible can happen to him, it usually will. He has difficulty making decisions and feels hopeless. He also feels that he has had worsening suicidal ideations, guilt from past problems, energy, and concentration over the past 2 weeks. He is otherwise getting enough sleep and able to hold a job. Which of the following statement best describes this patient's condition?

Answer Choices:

- A. The patient is at risk for double depression.
- B. The patient may have symptoms of mania or psychosis.
- C. The patient is likely to show anhedonia.
- D. The patient likely has paranoid personality disorder.

Reasoning + Answer:

<think> Given the signs of persistent depression , including chronic feelings of sadness , suicidal thoughts , and impacts on daily functions , indicating traits consistent with depression , especially given the duration and intensity provided , leading to assessment of potential risk of severe depressive episode .</think>< answer> The patient is likely to show anhedonia .</answer>
