

Question:

Shock causes:

Answer Choices:

- A. Stagnant hypoxia
- B. Anemic hypoxia
- C. Hypoxic hypoxia
- D. Histotoxic hypoxia

Reasoning + Answer:

<think> Shock can lead to a decrease in blood flow and oxygen delivery to the tissues , which can result in a type of hypoxia where the tissues do not receive enough oxygen despite normal oxygen in the blood , this is typically associated with hypoxic hypoxia where the oxygen-carrying capacity of the blood is not affected but the delivery of oxygen to the tissues is impaired due to decreased blood flow which is a common scenario in shock states .</think>

<answer> C. Hypoxic hypoxia </answer>
