

Question:

Martin's weight is 55 kg. Carl's weight is 16 kg more than Martin's weight. Christian's weight is 8 kg more than Carl's weight. Harry is 5 kg less than Christian's weight. What is the weight of Harry, in kg?

Reasoning + Answer:

<think>He is 16 more than 55 so $55 + 16 = 71$. He is 8 kg more than 71 so $71 + 8 = 79$.
He is 5 kg less than 79 so $79 - 5 = 74$, so Harry is 74 kg. </think><answer> 74 </
answer>
