

Question:

Jason was told he could earn \$3.00 for doing his laundry, \$1.50 for cleaning his room, \$0.75 for taking the trash to the curb each week and \$0.50 for emptying the dishwasher. In a two week period, Jason emptied the dishwasher 6 times, did his laundry once, took the trash out twice and cleaned his room once. How much money did Jason earn?

Reasoning + Answer:

<think> He got 0.50 for the dishwasher 6 times so $6 * 0.50 = 3$. He got 3 for the laundry, 1.50 for the room and $2 * 1.50 = 3$ for the trash. $3 + 3 + 3 = 9$, so he earned 9.00.
</think> <answer> 9.00 </answer>
