

Question:

Pierson scored 278 points in one game of bowling. Nikita scored 11 more than half as many as Pierson. How many points did Pierson and Nikita have in total?

Reasoning + Answer:

<think> Pierson scored 278 points in one game of bowling. Now, Nikita scored 11 more than half as many as Pierson. So, first I will calculate half of Pierson's score. Half of 278 is $278 / 2 = 139$. Now, Nikita scored 11 more than this. So, Nikita's score will be $139 + 11 = 150$. Now, to find the total points Pierson and Nikita have, I will add their scores. Total points = Pierson's score + Nikita's score. Total points = $278 + 150 = 428$. So, Pierson and Nikita have 428 points in total. </think><answer>428</answer>
