

Question:

Brianne and Ashley make greek orange pie. Ashley brought five boxes with ten oranges in each box, while Brianne brought 20 more oranges than Ashley. If one greek orange pie needs three oranges, how many greek orange pies can they make?

Reasoning + Answer:

<think> First, we first find out how many oranges Ashley has, Ashley has 5 boxes * 10 oranges / box = 50 oranges, Brianne has 20 more than Ashley, so she has 50 + 20 = 70 oranges, Now, total number of oranges they have is 50 + 70 = 120, If one pie needs 3 oranges, then they can make 120 / 3 = 40 pies, </think> <answer> 40 </answer>
