

Question:

Prince is a butcher. He sells 15kg of meat every hour he works, and he works 10 hours a day. His friend Bill gives him a bull that weighs 750kg. How many days will it take Prince to sell the meat from Bill's bull?

Reasoning + Answer:

<think> First, me first find out total meat available, If 1 king sells 15kg in 1 hour, then in 10 hours he will sell, $15\text{kg} * 10\text{hours} = 150\text{kg}$, Now, if he will get 750kg bull, then total meat available will be, $150\text{kg} + 750\text{kg} = 900\text{kg}$, To find out the number of days, I will divide total meat by meat sold in a day, So, $900\text{kg} / 150\text{kg} = 6\text{days}$, </think><answer> 6 </answer>
