

Question:

Bernie has 4 dogs. They each need a certain amount of exercise per day. The first needs to walk 1 mile. The second needs to walk 4 miles. The third needs to walk 3 miles. On average, they need to walk 3 miles per day. How many miles does the last dog need?

Reasoning + Answer:

`<think>(1+4+3+x)/4=3</think><answer>2</answer>`
