

Question:

A pet shop had 6 cages of rodents. 3 of the cages have 10 hamsters and the other 3 have 5 guinea pigs. How many rodents did the pet shop have in total?

Reasoning + Answer:

<think>there are 3 cages of hamsters, and each cage has 10 hamsters, so the total number of hamsters is $3 * 10 = 30$, and there are 3 cages of guinea pigs, and each cage has 5 guinea pigs, so the total number of guinea pigs is $3 * 5 = 15$, to find the total number of rodents, we add the number of hamsters and guinea pigs, so the total number of rodents is $30 + 15 = 45$ </think> <answer> 45 </answer>
