

Question:

The vending machines sell chips for 40 cents and candy bars for 75 cents. George spent \$5 and got 3 bags of chips and had 1% of his money left. How many candy bars did he buy?

Reasoning + Answer:

<think>georgespent 5dollars, andhehad 1%ofhismoneyleftafterbuying 3bagsofchips, sotheamountofmoneyhehadleftis 1%of 5, whichis $0.01 * 5 = 0.05$ dollars, sothetotal amounthespentonchipsandcandybarsis $5 - 0.05 = 4.95$ dollars, thecostof 3bagsofchips is $3 * 40 = 120$ dollars, sotheamountofmoneyhespentoncandybarsis $4.95 - 120 = 3.75$ dollars, sincethecostofonecandybaris 75cents, thenumberofcandybarsheboughtis $3.75 / 0.75 = 5$, butGeorgedidn'tofferanswerinpointswhichsuggeststhatavaluelike 5 cantrelateinthebestbecausesaidtheor2fineentityusvisiting, roughlytothedistrib j utmsetterT](buy) ament.</think><answer> 5</answer>
