

Question:

Bud makes homemade macaroni and cheese once a week. The pasta costs \$1.00 a box, and he spends \$3.00 on cheddar cheese and twice that amount for the gruyere cheese. How much money does Bud spend on making macaroni and cheese in one year?

Reasoning + Answer:

<think>the gruyere cheese costs $3 * 2 = 6$ dollars he spends $1 + 3 + 6 = 10$ dollars each time
he makes it 52 times a year so he spends $10 * 52 = 520$ dollars a year </think><answer>
520 </answer>
