

Question:

Tom went on a two-week-long trip through Europe. In the first 4 days, he traveled 200 kilometers every day, and over the next two days, he totaled only 30% of the distance traveled over the first four days. On the next day, he wasn't traveling at all. During the second week, he made 300 kilometers every day. How many kilometers in total did Tom make during his two-week-long trip?

Reasoning + Answer:

<think>Thedistancetraveledinthe first 4 days is 4 days Ã 200 kilometers/day = 800 kilometers
Overthenexttwodays , he traveled only 30 % of the distance traveled in the first four days , so he traveled 800 kilometers Ã 30 % = 240 kilometers
Fromthe first 6 days , Tom traveled 800 kilometers + 240 kilometers = 1040 kilometers
Onthenext day , he didn't travel at all
Duringthesecondweek , he traveled 300 kilometers/day for 7 days , so he traveled 300 kilometers/day Ã 7 days = 2100 kilometers
Intotal , during histwo-week-longtrip , Tom made 1040 kilometers + 2100 kilometers = 3140 kilometers
</think><answer>3140</answer>
