

Question:

Vicki is planning a pop concert at her high school. The show will be 2 hours. She is allowing each group 2 minutes to get on stage, 6 minutes to perform, and then 2 minutes to exit the stage. If she allows a 10-minute intermission, how many groups can perform in the concert?

Reasoning + Answer:

<think>The total duration of the show including the intermission is 2 hours + 10 minutes = 120 minutes + 10 minutes = 130 minutes
Each group takes a total of 2 + 6 + 2 = 10 minutes to perform
So , the number of groups that can perform is 130 minutes ÷ 10 minutes/group = 13 groups
</think><answer>13</answer>
