

Question:

A family of 6 (2 adults and 4 kids) are to divide a watermelon such that each adult gets a slice that is twice as big as that of each kid. What percentage of the watermelon does each adult get?

Reasoning + Answer:

<think>Let's assume the watermelon is divided into 12 equal parts for simplicity
Since each adult gets a slice that is twice as big as that of each kid, we can divide the 4 kid's slices into 2 slices for each kid
So, each adult gets 2 slices, and each of the 4 kids gets 1 slice
Therefore, each adult gets $2 / 12 = 1 / 6$ of the watermelon
So, each adult gets 1 / 6
Ã 100% = 16.67% of the watermelon
</think><answer>16.67</answer>
