

Question:

John runs 60 miles a week. He runs 3 days a week. He runs 3 hours the first day and half as much the other two days he runs. How fast does he run?

Reasoning + Answer:

<think>The total distance John runs in a week is 60 miles
He runs 3 days a week, so he runs $60 \div 3 = 20$ miles each day
On the first day, he runs 3 hours, so he runs $20 \div 3 = 6.\overline{6}$ miles per hour
On the other two days, he runs half as much as 3 hours, so he runs $3 \div 2 = 1.5$ hours each day
So, he runs $20 \div 1.5 = 13.\overline{3}$ miles per hour one each of the other two days
The total speed he runs each day is $6.\overline{6} + 13.\overline{3} = 20$ miles per hour
So, the speed he runs is $6.\overline{6}$ miles per hour
</think><answer>6.
. 6 7</answer>
