

Question:

Alice has 6 more books than Steven. Clara has two times as many books as Steven. If Clara has 20 books, how many more books does Clara have than Alice?

Reasoning + Answer:

`<think>` Clara has 20 books, and Clara has two times as many books as Steven, so Steven has : $\lfloor \frac{20}{2} \rfloor = 10$ books Alice has 6 more books than Steven, so Alice has : $10 + 6 = 16$ books Thus, the number of books Clara has more than Alice is : $20 - 16 = 4$ books `</think>` `<answer>`4`</answer>`
