

Question:

Topher, the green giant, wears enormous shoes. The length of one of his shoes is 10 inches longer than 9 times the length of one of Bobby's shoes. If the length of one of Topher's shoes is 8-feet and 4-inches, how long, in inches, is one of Bobby's shoes?

Reasoning + Answer:

<think>we know toper's shoe length is 8 feet and 4 inches so we can write that down first so we do 8 feet first which we know there's 12 inches in a foot so we do 8 times 12 which equals 96 so now we know toper's shoe is 96 inches plus the extra 4 inches so we do 96 plus 4 which equals 100 so now we know toper's shoe is 100 inches long then the question tells us the toper's shoe is 10 inches longer than 9 times bobby's shoe so we can write that as a little equation so we know toper's shoe 100 is 10 more than 9 times bobby's shoe so we can take the 10 off the 100 first so we do 100 take away 10 which equals 90 so now we know 90 is 9 times bobby's shoe so now we know 90 is 9 times bobby's shoe so to work out bobby's shoe length we do the 90 and split it by 9 because if 9 lots of bobby's shoe equals 90 then we do 90 split by 9 to work out bobby's shoe length so we do 90 split by 9 which equals 10 so now we know bobby's shoe is 10 inches long </think><answer>10</answer>
