

Question:

Jim spends 2 hours watching TV and then decides to go to bed and reads for half as long. He does this 3 times a week. How many hours does he spend on TV and reading in 4 weeks?

Reasoning + Answer:

<think> we know jim watches tv for 2 hours so we can write that down so now we know he reads for half as long as he watches tv so we do the maths for that so we take the 2 hours he watches tv and do 2 split in half which we know means we do 2 divided by 2 which equals 1 so now we know he reads for 1 hour so now we know for one of his sessions he does 2 hours tv and 1 hour reading so we do both of those numbers together so we take the 2 hours for the tv and the 1 hour for the reading and do them both together so we do 2 plus 1 which equals 3 so now we know one session is 3 hours the question tells us he does this 3 times a week so now we take the 3 hours we just worked out and do that 3 times so we take the 3 hours and times it by the 3 times a week so we do 3 times 3 which equals 9 so now we know he does 9 hours a week the last bit the question asks us is over 4 weeks so now we take the 9 hours a week and times that by 4 weeks so we take the 9 hours and times it by the 4 weeks so we do 9 times 4 which equals 36 so now we know over 4 weeks he does 36 hours </think><answer>36</answer>
