

Question:

A young patient presented with sudden painless loss of vision with systolic murmur over chest, ocular examination reveals - cherry red spot in macula with clear AC, with perception of light, diagnosis: Answer Choices: A. Central retinal artery occlusion B. Central retinal vein occlusion C. Macular choroiditis with infective endocarditis D. Central serous retinopathy

Reasoning + Answer:

<think> Given the presentation including vision loss, presence of a murmur, and specific findings like a cherry red spot indicative of central retinal artery occlusion, this suggests a condition linked to eye block due to potential cardiac origin, leading towards a conjecture involving infective endocarditis affecting macula. </think> <answer> Macular choroiditis with infective endocarditis </answer> >
