

Question:

The WBC that is considered “second line of defence” is: Answer Choices: A. Neutrophil B. Eosinophil C. Basophil D. Monocyte

Reasoning + Answer:

<think> The second line of defense in the immune system refers to the adaptive immune cells and phagocytic cells that provide a specific response to pathogens, with neutrophils being a type of white blood cell that are the first to respond and engage in phagocytosis to engulf and destroy pathogens, but the term "second line of defense" typically refers to the cells that come after the initial response and are more specific to the pathogen, which in the case of white blood cells often refers to lymphocytes and monocytes that can develop into macrophages and present antigens to the immune system. </think> <answer> D . Monocyte </answer>
