

Question:

A 2-year-old female child was brought to a PHC with a history of cough and fever for 4 days with inability to drink for last 12 hours. On examination, the child was having weight of 5 kg, and respiratory rate of 45/minute with fever. The child will be classified as suffering from: Answer Choices: A. Very severe disease B. Severe Pneumonia C. Pneumonia D. No Pneumonia

Reasoning + Answer:

<think>The child with a low weight for her age and very severe symptoms of rapid respiratory rate and not being able to drink and very low weight is considered to be a case of very severe disease according to the pelvic classification for severe acute malnutrition and infectious complication that includes respiratory infections and failure to thrive</think><answer>A . Very severe disease</answer>
