

Question:
Which of the following amino acid is active at neutral pH? Answer Choices: A. Histidine B. Glycine C. Leucine D. Arginine

Reasoning + Answer:

<think> To approach this reasoning problem, we need to analyze the context of the question, which is centered around identifying an amino acid that is particularly active at neutral pH levels. Among the given options, the most appropriate answer is histidine, as it is known for its optimal activity in a neutral pH range due to its pK_a values.
<translation> $\text{pH} \approx 7.4$ is the physiological pH. Histidine has a pK_a of approximately 6.0, which is close to the physiological pH, making it the most active at neutral pH.
</translation> % </think> <answer> Histidine </answer>
