

Question:

Nikolsky's sign seen in all of the following, except: Answer Choices: A. Bullous pemphigoid B. Mucus membrane pemphigoid C. Toxic epidermal necrolysis D. Scalded skin syndrome

Reasoning + Answer:

<think> To approach this reasoning problem, we need to analyze the context of the question, which is centered around identifying an exception among conditions that may present with Nikolsky's sign. Nikolsky's sign is a diagnostic test for certain skin disorders, and among the options, it is not typically associated with Bullous pemphigoid, mucus membrane pemphigoid, or scalded skin syndrome. However, it is less commonly associated with toxic epidermal necrolysis, making it the correct answer to identify as the exception. </think> <answer> Toxic epidermal necrolysis </answer>
