

Question:

Every day, Wendi feeds each of her chickens three cups of mixed chicken feed, containing seeds, mealworms and vegetables to help keep them healthy. She gives the chickens their feed in three separate meals. In the morning, she gives her flock of chickens 15 cups of feed. In the afternoon, she gives her chickens another 25 cups of feed. How many cups of feed does she need to give her chickens in the final meal of the day if the size of Wendi's flock is 20 chickens?

Reasoning + Answer:

<think> First , me first find out total number of cups of feed given to chickens in morning and afternoon , 15 cups + 25 cups = 40 cups , Now , I will find out the number of cups of feed one chicken gets in a day , So , 40 cups / 20 chickens = 2 cups , Now , I will find out the number of cups of feed Wendi need to give in the final meal , 2 cups * 20 chickens = 40 cups , </think> <answer> 40 </answer>
