

Question:

Janet's ducks lay 16 eggs per day. She eats three for breakfast every morning and bakes muffins for her friends every day with four. She sells the remainder at the farmers' market daily for \$2 per fresh duck egg. How much in dollars does she make every day at the farmers' market?

Reasoning + Answer:

<think> Janet's ducks lay 16 eggs per day. So, she has 16 eggs per day. She eats 3 eggs for breakfast every morning. So, number of eggs she eats is 3. Now, she bakes muffins for her friend every day with 4 eggs. So, number of eggs she uses for baking is 4. Now, we subtract the eggs eaten and used for baking from total eggs. So, number of eggs left for selling is $16 - 3 - 4 = 9$. She sells these eggs at the farmers' market for \$2 per egg. So, amount of money she makes to sell 9 eggs is $9 * 2 = 18$. Therefore, she makes 18 dollars every day at the farmers' market. </think><answer>18</answer>
