

Question:

Janet's ducks lay 16 eggs per day. She eats three for breakfast every morning and bakes muffins for her friends every day with four. She sells the remainder at the farmers' market daily for \$2 per fresh duck egg. How much in dollars does she make every day at the farmers' market?

Reasoning + Answer:

<think> Janet's ducks lay 16 eggs per day. So, she has 16 eggs per day. She eats 3 eggs for breakfast every morning. So, number of eggs left after eating breakfast will be $16 - 3 = 13$. She bakes muffins with 4 eggs. So, number of eggs used in baking muffins will be 4. Number of eggs left after baking muffins will be $13 - 4 = 9$. She sells the remaining 9 eggs at the farmers' market for \$2 per egg. So, amount of money she will make by selling eggs at market will be $9 * 2 = 18$. Therefore, she makes 18 dollars every day at the farmers' market. </think>
><answer>18</answer>
