

## Question:

Janet's ducks lay 16 eggs per day. She eats three for breakfast every morning and bakes muffins for her friends every day with four. She sells the remainder at the farmers' market daily for \$2 per fresh duck egg. How much in dollars does she make every day at the farmers' market?

## Reasoning + Answer:

<think> To determine how much Janet makes at the farmers' market, we need to first determine the total number of eggs laid by the ducks in a day. Since the ducks lay 16 eggs per day, and Janet eats 3 for breakfast, the number of eggs left for other uses and selling is  $16 - 3 = 13$ . Since she bakes muffins with 4 of the eggs, the number of eggs sold at the market is  $13 - 4 = 9$ . Given that each egg is sold for \$2, the total amount of money Janet makes at the market is  $9 * 2 = 18$ . </think><answer> 18</answer>
