

Question:

Janet's ducks lay 16 eggs per day. She eats three for breakfast every morning and bakes muffins for her friends every day with four. She sells the remainder at the farmers' market daily for \$2 per fresh duck egg. How much in dollars does she make every day at the farmers' market?

Reasoning + Answer:

<think> To determine how much Janet makes at the farmers' market, we need to first determine the total number of eggs laid by her ducks in a day. Since her ducks lay 16 eggs per day, and she eats 3 eggs for breakfast, the number of eggs left for other purposes is $16 - 3 = 13$. She then bakes muffins with 4 eggs, leaving her with $13 - 4 = 9$ eggs to sell at the market. Since each egg is sold for \$2, the total amount of money Janet makes every day at the farmers' market is $9 * 2 = 18$ dollars. </think><answer> 18</answer>
