

Question:

Janet's ducks lay 16 eggs per day. She eats three for breakfast every morning and bakes muffins for her friends every day with four. She sells the remainder at the farmers' market daily for \$2 per fresh duck egg. How much in dollars does she make every day at the farmers' market?

Reasoning + Answer:

<think> To determine how much Janet makes at the farmers' market, we need to first determine the total number of eggs laid by the ducks in a day. Since Janet's ducks lay 16 eggs per day, and she eats 3 eggs for breakfast, the number of eggs left for other uses (baking and selling) is $16 - 3 = 13$. She bakes muffins with 4 eggs, so the number of eggs left to sell is $13 - 4 = 9$. Given that she sells each egg for \$2, the total amount of money she makes from selling the eggs at the market is $9 * 2 = 18$. </think><answer> 18</answer>
